

# Put your APIs in the hands of millions of developers

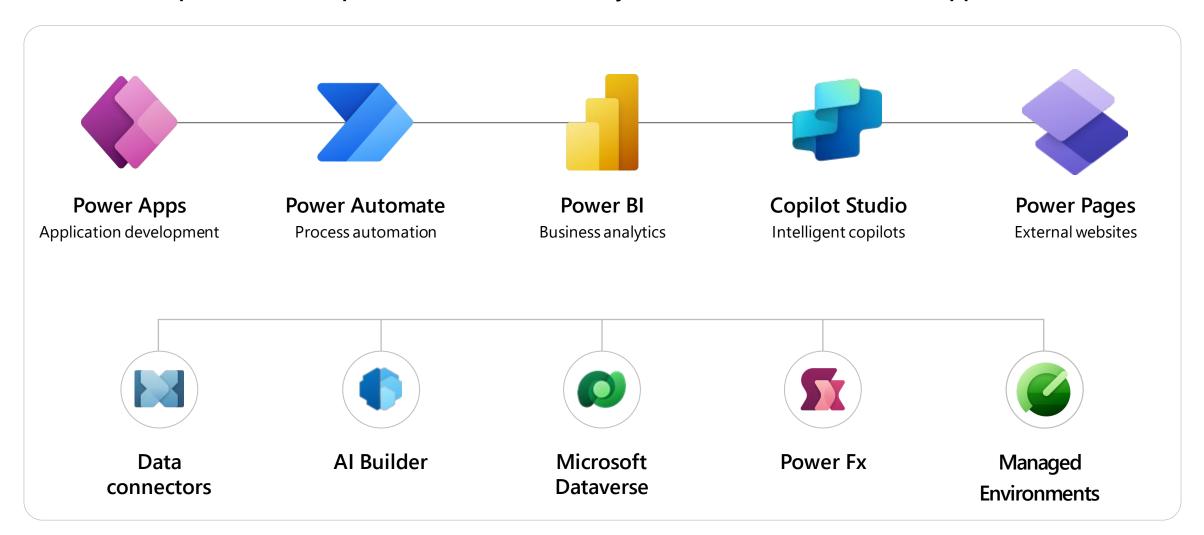

#### **Daniel Laskewitz**

Senior Cloud Advocate Microsoft

## **Power Platform**

#### Microsoft Power Platform

The low-code platform that spans Office 365, Azure, Dynamics 365, and standalone applications

## Connectors

#### What is a connector?

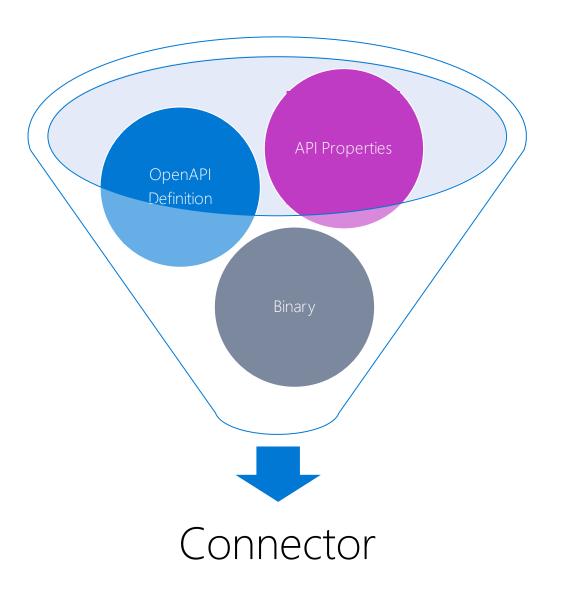

A formal definition of a **REST API** 

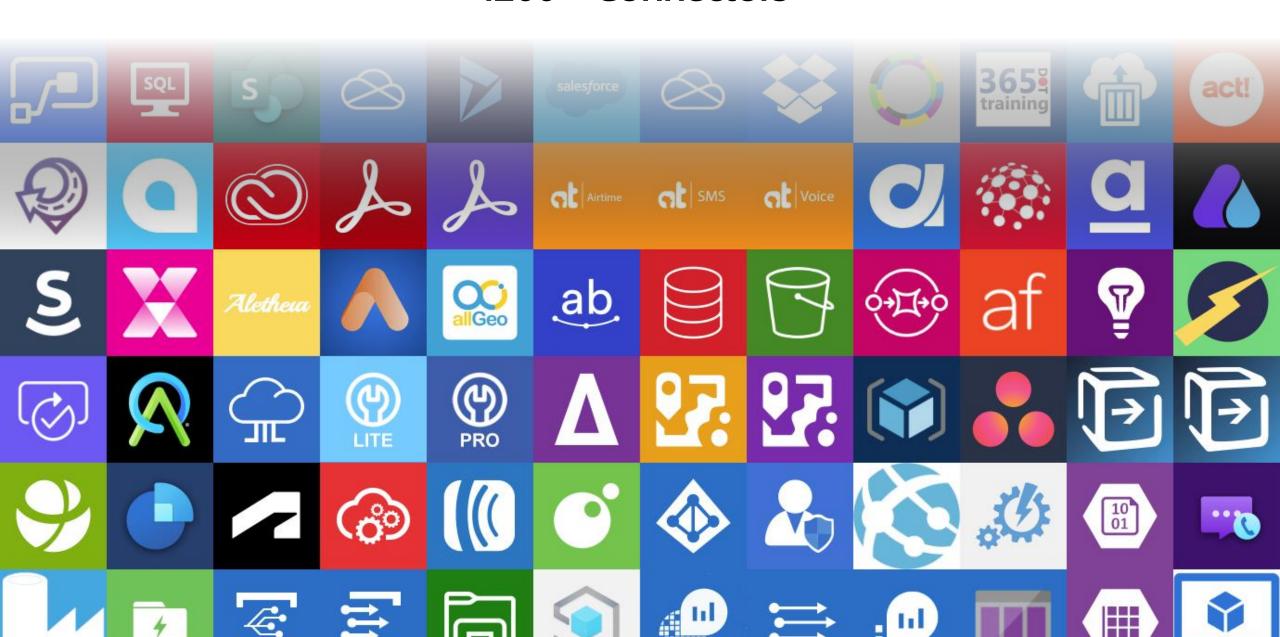

Allows the **REST API** to talk to Microsoft Power Apps, Power Automate, and Logic Apps

Currently **1200+** connectors in the product

#### 1200+ Connectors

## Why use custom connectors?

Add services that are not currently supported

Expand connectors that currently don't have the trigger/action you want

Custom connectors are simple to build, don't require a lot of coding

Can be built using the wizard, a postman collection, or with your favourite IDE (for instance VS Code)

Can be shared, packaged and certified via GitHub

## Step by step: Build a connector

Start in one of the products (Power Apps, Power Automate or Logic Apps)

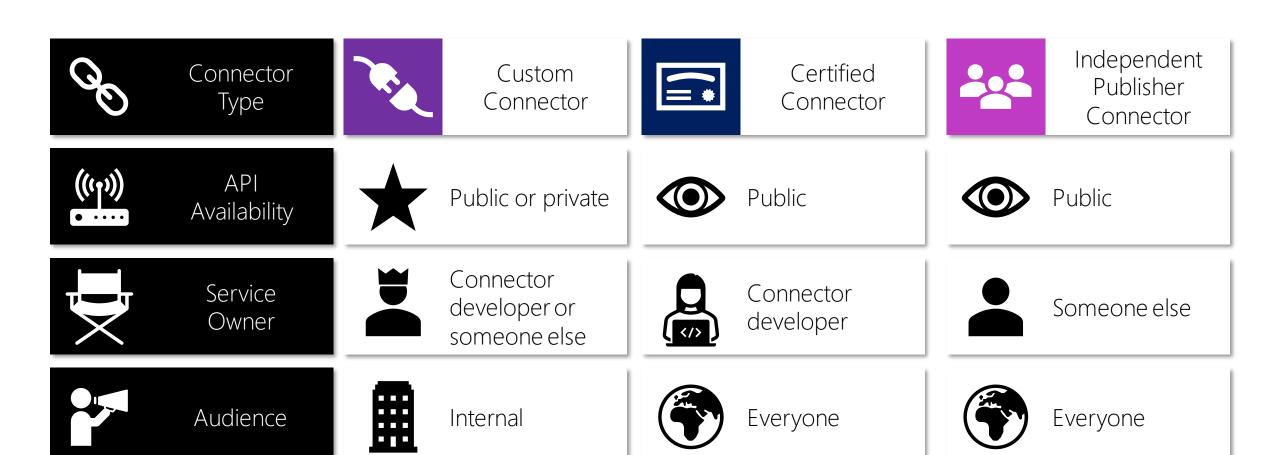

Set up the authentication

Define the operations (triggers / actions) for your connector

Add code if needed (for now, C# code is supported)

Save and test your connector

## Types of connectors

## Demo

Build your first custom connector.

## **Get Started**

#### **Get Started**

Get started with your own developer environment: <a href="https://aka.ms/pp/get-started">https://aka.ms/pp/get-started</a>
